

Fold-alignment test

One-sided test / Fold on the dashed vertical line / No duplex printing

1. Print once at 100%. Check the scale reference before folding.
2. Crease exactly along the dashed line so printed faces meet.
3. Hold the folded sheet against a light. Matching A, B and C crosses should overlap.
4. Record the measured horizontal/vertical offset at each pair. A crooked fold and printer distortion are different causes; repeat with a fresh sheet before changing printer settings.
