

Fold-flat presentation folder

Full-size cutting template / keep all fold guides

Fold-flat presentation folder

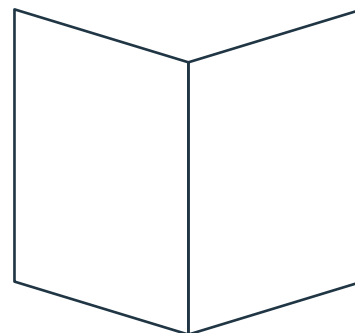

Assembly / solid = cut / dashed = fold

MAKE THE PROJECT

A 180 x 130 mm fold-flat folder base with panel widths 90, 90 mm.

YOU WILL NEED

Paper or light card, scissors, ruler and a blunt scoring tool; adhesive for added panels.

Construction diagram

- 01** Cut around the outer rectangle. Score only the dashed fold lines before decorating the blank panels.
- 02** Fold the right panel over the left along the central crease. Decorate only after testing that the panels close flat.
- 03** Check the finished folds on scrap first. These dimensions do not establish compatibility with a commercial card or envelope size.

Try the pattern on ordinary paper first. Nominal fold dimensions exclude paper thickness. No physical assembly, load-bearing, food-contact or shipping performance has been verified.
