

Plain paper weaving mat

Sheet 1 / Foundation / Solid = cut; dashed center = temporary fold

140 mm foundation / 12 columns

Keep the 10 mm outer rails intact.

- 1. Cut out the outer square. Fold it crosswise on the dashed centerline.
- 2. From the folded edge, cut each slit toward its marked stopping dot. Do not cut through the border.
- 3. Unfold and flatten. Keep the numbered chart nearby; page 2 supplies the crossing strips.

12

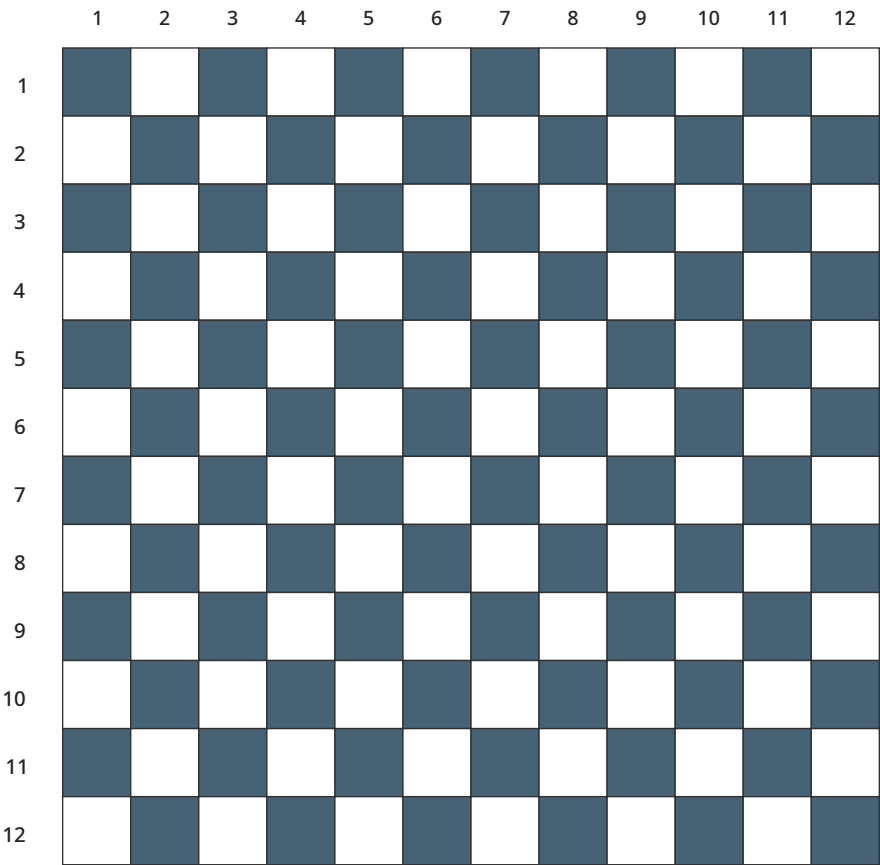

Use a contrasting sheet for these strips so the weave is easy to see. Cut all 12 strips.

Start row 1 at the top of the foundation. Follow the chart left to right: dark means crossing strip ON TOP; white means UNDER.

Slide each row close to the previous row. Tuck and secure the two ends at the side rails after checking the pattern.

Plain paper weaving mat

Sheet 3 / Weave chart and row sequence / View from the finished front

- Crossing strip over the vertical column
- Crossing strip under the vertical column

Row 1: O U O U O U O U O U O U

Row 2: U O U O U O U O U O U O

Repeat these 2 rows to finish all 12 rows. O = over; U = under. Always read the chart from left to right, even if you insert a strip from the other side.

Use as a paper decoration, not a heat-resistant coaster. Check the result on scrap before preparing a group activity.
