

Z-fold greeting card base

Full-size cutting template / keep all fold guides

Z-fold greeting card base

Assembly / solid = cut / dashed = fold

MAKE THE PROJECT

A 180 x 120 mm z-fold base with panel widths 45, 45, 90 mm.

YOU WILL NEED

Paper or light card, scissors, ruler and a blunt scoring tool; adhesive for added panels.

- 01 Cut around the outer rectangle. Score only the dashed fold lines before decorating the blank panels.
 - 02 Fold the first 45 mm panel back at the first crease. Fold the second crease in the opposite direction to form a Z in side view.
 - 03 Keep any separate decoration inside the front-panel width until you have tested how the card closes.
 - 04 Check the finished folds on scrap first. These dimensions do not establish compatibility with a commercial card or envelope size.
-

Try the pattern on ordinary paper first. Paper thickness, folds and joins affect the result. The digital layout is checked; physical assembly and durability remain untested.
