50 mm scale check | Measure after printing

Easel greeting card base

Assembly / solid = cut / dashed = fold

MAKE THE PROJECT

A 180 x 90 mm easel base with panel widths 90, 45, 45 mm.

YOU WILL NEED

Paper or light card, scissors, ruler and a blunt scoring tool; adhesive for added panels.

- 01 Cut around the outer rectangle. Score only the dashed fold lines before decorating the blank panels.
- 02 Fold the 90 mm base under the two 45 mm support panels. Crease the second fold so the outer panel angles upward.
- 03 Attach the separate 90 x 65 mm display face to the outer MOUNT panel only, aligning its lower edge to that panel.
- 04 Glue the small stopper onto the base after testing the display angle. The display edge rests behind it; do not glue the hinge shut.
- 05 Check the finished folds on scrap first. These dimensions do not establish compatibility with a commercial card or envelope size.

Try the pattern on ordinary paper first. Paper thickness, folds and joins affect the result. The digital layout is checked; physical assembly and durability remain untested.
