

Bridged number stencils

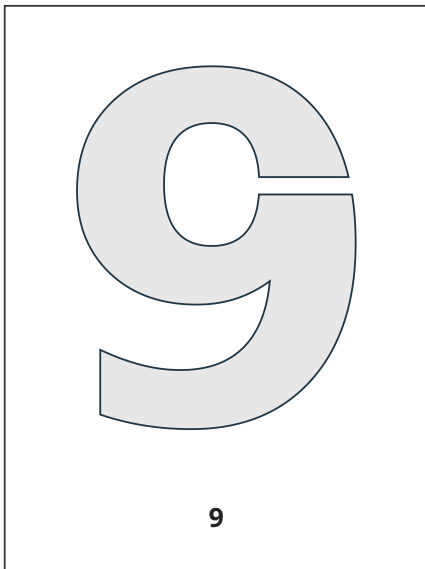

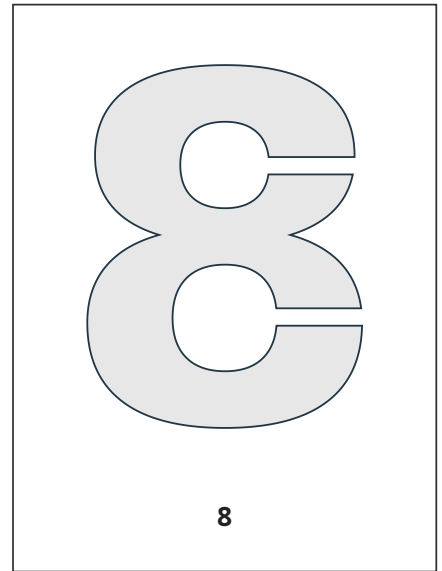

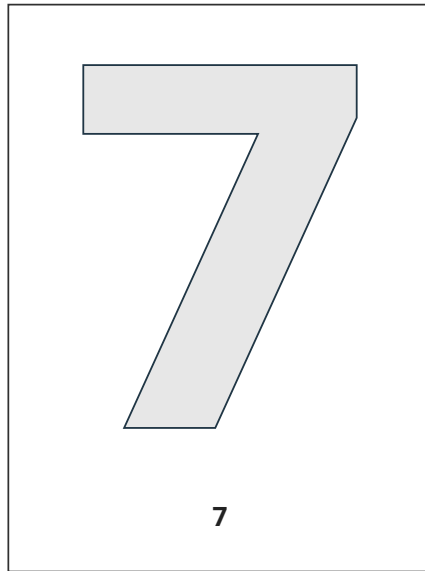

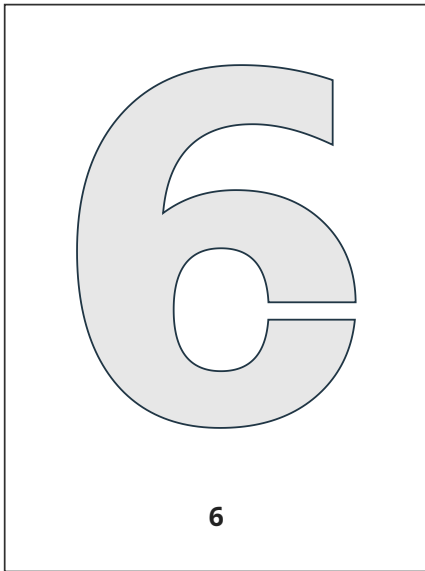

Cut shaded letter areas / retain the white bridges

50 mm scale check | Measure after printing

Bridged number stencils

Cut shaded letter areas / retain the white bridges

Bridged number stencils

Assembly / solid = cut / dashed = fold

MAKE THE PROJECT

10 individual digit stencil cards. Necessary interior counters are connected with 2.3 mm retaining bridges.

YOU WILL NEED

Card stock, scissors, pencil; optional craft knife, cutting mat and low-tack tape.

- 01 Print only the pages containing the characters you need. Keep an untouched master for later reuse.
- 02 Cut out each rectangular card first. Then remove only the gray glyph regions, keeping every white bridge and the border intact.
- 03 Use a craft knife only on a cutting mat with appropriate adult supervision. Small details are not suitable for unsupervised cutting by young children.
- 04 Try the stencil on spare paper with a pencil or lightly loaded sponge. Tape the card in place without obstructing the character.
- 05 Do not close or cut away the bridges: they keep the interior islands attached. Printer paper is a trial material; durability depends on the final stock and repeated use.

Uppercase A-Z or digits 0-9 only. Typeface-derived outlines: DejaVu Sans Bold; no font binary supplied. No stencil material, cutting machine or physical durability is certified.
